

Q: Combinations in product list are missing after installation?

OPTIONAL REASON #1

In your performance section in back office, try to remove cache by clicking to button **clear cache**. Performance section is located in menu **Advanced Parameters->Performance**.

OPTIONAL (MOST OFTEN) REASON #2

This module use mandatory hook called **displayProductPriceBlock (type = weight)** to show combinations in product list. In theme tpl file, its look like this:

```
{hook h='displayProductPriceBlock' product=$product type='weight'}
```

If you are using custom theme, developer of your theme maybe not implement this hook to your theme.

If you are using prestashop version 1.7.X, you can check it in path:

themes/YOUR_THEME/templates/catalog/_partials/miniatures/product.tpl

If you are using prestashop version 1.6.X, you can check it in path:

themes/YOUR_THEME/product-list.tpl

Please check in this tpl file, if there is line contain

```
{hook h='displayProductPriceBlock' product=$product type='weight'}
```

Like you can see also in picture below:

```
65 {elseif $product.discount_type == 'amount'}
66 <span class="discount-amount discount-product">{$product.discount_amount_to_display}</span>
67 {if}
68 {/if}
69
70 {hook h='displayProductPriceBlock' product=$product type="before_price"}
71
72 <span class="sr-only">{l s='Price' d='Shop.Theme.Catalog'}</span>
73 <span itemprop="price" class="price">{$product.price}</span>
74
75 {hook h='displayProductPriceBlock' product=$product type='unit_price'}
76
77 {hook h='displayProductPriceBlock' product=$product type='weight'}
78 </div>
79 {/if}
80 {/block}
81
```

OPTIONAL REASON #3

In module configuration, there are options to set places, where this module is activated or not. These options are set to NO right after installation. You have to set YES for each place, where you want to display functionality of this module - for example home page, category page, search results page, etc. You can see these options in picture below.

MODULE SETTINGS

Show combinations on home page products: ☒ YES ☐ NO
You can display products combinations on home page

Show combinations in products categories: ☒ YES ☐ NO
You can display products combinations in categories of products

Show combinations in search results: ☒ YES ☐ NO
You can display products combinations in product list of search result

Show combinations in related products list: ☒ YES ☐ NO
You can display products combinations in related products list in product

OPTIONAL REASON #4

Try to check if this module is hooked to **displayProductPriceBlock** and **displayHeader** hooks. You can check it in your back office in menu section **Design->Positions** (for prestashop version 1.7.X) or in section **Modules and Services->Positions** (for prestashop version 1.6.X). You have to choose there module **Combinations in products list** in modules filter and check also option **Display non-positionable hooks** below. After this operation, you should see this module hooked in 2 hooks - displayProductPriceBlock and Header. You can see correct result also in picture below. If its not hooked both hooks, click to Transplant a module in top right corner and hook this module to necessary hooks.

☐ **Combinations in products list** - v1.5.0
Module to show products combinations in product lists with "add to cart" button Edit

Header 5 Modules
This hook adds additional elements in the head section of your pages (head section of html)

<input type="checkbox"/>	1	 Image slider - v3.0.0 Adds an image slider to your site. Edit
<input type="checkbox"/>	2	 Search bar - v2.0.1 Adds a quick search field to your website. Edit
<input type="checkbox"/>	3	 Shopping cart - v2.0.2 Adds a block containing the customer's shopping cart. Edit
<input type="checkbox"/>	4	 PayPal - v4.4.2 Benefit from PayPal's complete payments platform and grow your business online, on mobile and internationally. Accept credit cards, debit cards and PayPal payments. Edit
<input type="checkbox"/>	5	 Combinations in products list - v1.5.0 Module to show products combinations in product lists with "add to cart" button Edit

Q: Combinations in product list are displayed wrong?

OPTIONAL REASON #1

This module use mandatory hook called **displayProductPriceBlock (type = weight)** to show combinations in product list. In theme tpl file, its look like this:

```
{hook h='displayProductPriceBlock' product=$product type='weight'}
```

If you are using custom theme, developer of your theme maybe implement this hook to wrong place.

If you are using prestashop version 1.7.X, you can check it in path:

themes/YOUR_THEME/templates/catalog/_partials/miniatures/product.tpl

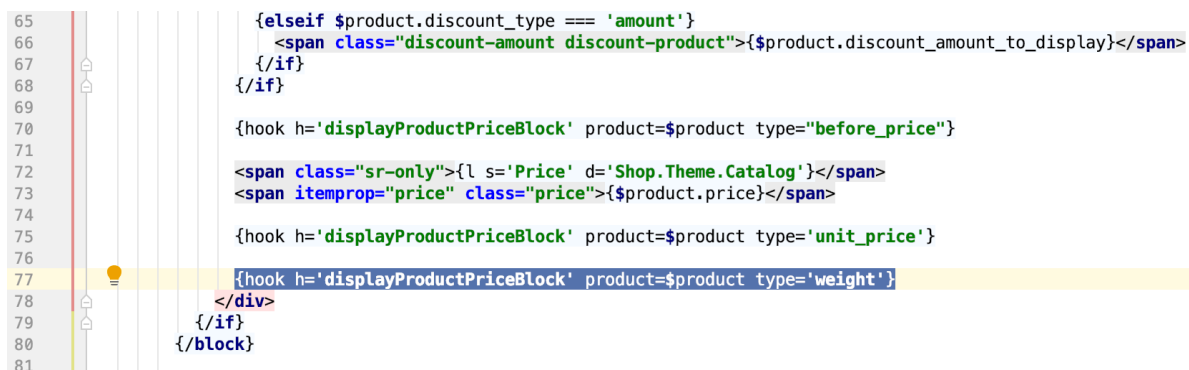

If you are using prestashop version 1.6.X, you can check it in path:

themes/YOUR_THEME/product-list.tpl

Please check if your tpl file contain

```
{hook h='displayProductPriceBlock' product=$product type='weight'}
```

and move this code to another place in this tpl file. By replacing this part of code, you can replace combinations form for each of your product. This may help you display combinations better for your products.

```
65 {elseif $product.discount_type == 'amount'}
66 <span class="discount-amount discount-product">{$product.discount_amount_to_display}</span>
67 {/if}
68 {/if}
69
70 {hook h='displayProductPriceBlock' product=$product type="before_price"}
71
72 <span class="sr-only">{l s='Price' d='Shop.Theme.Catalog'}</span>
73 <span itemprop="price" class="price">{$product.price}</span>
74
75 {hook h='displayProductPriceBlock' product=$product type='unit_price'}
76
77 {hook h='displayProductPriceBlock' product=$product type='weight'}
78 </div>
79 {/if}
80 {/block}
81
```

OPTIONAL REASON #2

If you are using custom theme, combinations in product list can inherit some styles from this theme. You can redesign this style in CSS file.

If you are using prestashop version 1.7.X, you can design this styles in CSS file in this path:

themes/YOUR_THEME/assets/css/custom.css

If you are using prestashop version 1.6.X, you can design this styles in CSS file in this path:

themes/YOUR_THEME/css/global.css

Q: Combinations in product list are working wrong?

OPTIONAL REASON #1

If you are using custom theme, sometimes your theme contain own “add to cart” buttons for products in catalog. In this situation, please remove from your theme sources for displaying “add to cart” buttons. After this operation remove cache in performance section and try functionality of this module again.
